SUMMARY

CS and Statistics student at the University of Toronto. Co-founded Mopply, a residential cleaning booking platform operating across Canada, where I own all data, analytics, and engineering functions. Also do freelance web development and data analysis on the side. I work well independently and tend to own projects from start to finish.

TECHNICAL SKILLS

- **Languages:** Python, Kotlin, Java, JavaScript, SQL, C++, Go
- **Frameworks & Tools:** React, Android Studio, Jetpack Compose, FastAPI, Docker, REST APIs, MySQL, WordPress
- **Data & Analytics:** Power BI, Pandas, NumPy, Scikit-learn, XGBoost, TensorFlow, Excel
- **Concepts:** MVVM, OOD, Data Structures & Algorithms, Statistical Modeling, Machine Learning, A/B Testing

EDUCATION

University of Toronto | HBSc

Toronto, Canada

Statistics, Mathematics, and Computer Science

09/2021 – 04/2026

- **University of Toronto Scholar** (CAD \$5,000) **Coursework:** Software Design, Systems Programming, Machine Learning, Information Security, Theory of Computation, DSA, Probability & Statistics

EXPERIENCE

Mopply Inc.

Toronto, Canada

Co-Founder & Data Analyst

11/2024 – Present

- Co-founded a residential cleaning booking platform now operating across Canada; own all data, analytics, and product functions alongside building the platform itself.
- Built pricing models in Python and Excel benchmarking competitor rates across 6+ markets; findings directly set the platform's flat-rate service tier structure.
- Maintain Power BI dashboards tracking booking volume, revenue, retention, and utilization; used weekly to guide business decisions.
- Ran A/B tests on 30+ ad creatives across 4 audience segments; used results to reduce cost-per-acquisition and shift budget to better-performing ads.

Self-Employed (Upwork)

Remote

Freelance Web Developer

04/2024 – Present

- Delivered 10+ client projects using HTML, CSS, JavaScript, React, and WordPress; handled scoping, development, and post-deployment support independently.
- Built responsive, performance-optimized web apps tailored to each client's requirements, maintaining a strong track record on the platform.

PROJECTS

Android & Web Booking Platform | Kotlin, Jetpack Compose, React, REST APIs

- Built and shipped both the Android app and web platform for Mopply from scratch — sole developer on both. Covers login, booking flow, time-slot selection, and address management across all device sizes.

Predictive Sales Forecasting Model | Python, Scikit-learn, XGBoost, Pandas

- Compared Linear Regression, Random Forest, and XGBoost on time-series sales data; selected best model by RMSE and MAE, then charted predicted vs. actual sales with confidence intervals.

Canadian Housing Market Analysis | Python, Pandas, NumPy, Power BI

- Cleaned 10,000+ rows of CMHC and StatsCan data; ran regression models across Toronto, Vancouver, and Calgary and built a Power BI dashboard showing affordability trends from 2018–2024.

SQL Customer Behaviour Analysis | SQL, Power BI

- Wrote 10+ queries using CTEs, window functions, and subqueries to segment customers by purchase behaviour and track retention over 12 months; summarized findings in a Power BI dashboard.

Security Assessment Lab | Kali Linux, Metasploit, Wireshark

- Ran penetration tests on Linux and Windows systems; found and documented vulnerabilities, reviewed encryption in use, and wrote up recommended fixes.
