Education

University of Toronto

Bachelor of Science (HBSoc) | Computer Science, Applied Statistics & Mathematics

Toronto, Canada

09/2021 – 06/2026

Technical Skills

AI & Machine Learning: Prompt Engineering, Embeddings, RAG, LLM APIs, NLP, Information Retrieval, AI Agents

Programming Languages: Python, Java, SQL, C++, Go, TypeScript, Bash, JavaScript

Data Processing & Libraries: PyTorch, TensorFlow, scikit-learn, Pandas, PostgreSQL, MySQL, Redis

Infrastructure & Workflows: Data Pipelines, APIs, Debugging, Docker, Git, AWS, CI/CD, Model Evaluation

Certifications & Training

Introduction to Generative AI | Google

Aug. 2026

Essentials of Prompt Engineering | Amazon Web Services (AWS)

Aug. 2026

AWS Cloud Practitioner Essentials | Amazon Web Services (AWS)

Aug. 2026

Experience

Moppy Cleaning Services Inc.

Toronto, Canada

Data & Security Engineer

06/2025 – 11/2025

- Built reliable AI prototypes and data pipelines, achieving zero security breaches, by experimenting with Python data processing and engineering secure API integrations.
- Investigated model failures and latency issues, reducing data retrieval times by 20%, by creating evaluation datasets and debugging secure cross-platform architectures.

Full Stack Engineer

11/2024 – 05/2025

- Integrated AI capabilities into reliable product systems for MVP launch, supporting real users, by utilizing Python, APIs, and Django frameworks for seamless cross-platform integration.
- Enhanced system scalability and search capabilities, reducing latency by 20%, by engineering distributed databases and applying information retrieval fundamentals.

Lead Android Developer

12/2025 – 06/2026

- Investigated application latency and performance issues, resulting in a ~30% reduction in technical debt, by debugging legacy client code and collaborating remotely with engineering teams.
- Optimized application performance, reducing system memory overhead by 20%, by implementing rigorous application life-cycle management and robust data processing techniques.

Upwork

Remote

Software Developer / Data & Systems Engineer

04/2024 – 06/2026

- Built AI-powered features for search and recommendations across 10+ client projects, maintaining 99% integration uptime, by programming in Python and utilizing LLM APIs.
- Measured model quality and accelerated incident resolution, reducing production bugs by 30%, by experimenting with prompts and standardizing Git CI/CD workflows remotely.

Projects

AI-Powered Web Application | *Python, LLM APIs, Recommendation Systems, REST APIs*

- Deployed AI-powered features for recommendations and personalization, supporting real users, by integrating LLM APIs and Python backends into a production-ready platform.
- Minimized backend API latency and accelerated data retrieval times, rapidly resolving production issues through rigorous model evaluation and Git version control.

Abstract Syntax Tree Evaluator | *Java, Information Retrieval, Structured Outputs*

- Created a reliable expression evaluation system, generating highly accurate structured outputs, by applying information retrieval fundamentals and data modeling.
- Maintained high code quality and eliminated runtime failures efficiently by writing comprehensive automated tests and debugging complex edge case execution.

Municipal Tree Data Pipeline | *Python, scikit-learn, Data Processing, Cloud Platforms*

- Engineered reliable data pipelines and evaluation datasets, successfully parsing extensive CSV datasets, by utilizing Python data processing frameworks and deploying services on AWS.
- Improved data observability and system scalability, measuring model quality effectively, by structuring complex analytical information into a relational backend using PostgreSQL.
